

## SCAN Policies Database State Profile 2021: Illinois

### Overview of the SCAN Policies Database

The State Child Abuse and Neglect (SCAN) Policies Database compiles data on the definitions and policies that states use in their surveillance of child maltreatment, along with data on associated risk and protective factors. The SCAN Policies Database is funded by the Office of Planning, Research, and Evaluation in collaboration with the Children's Bureau in the Administration for Children and Families, U.S. Department of Health and Human Services. Mathematica leads this project in partnership with Child Trends.

The project's purpose is to review and compile information from states' definitions and policies to create a database of those definitions and policies that can be used for analysis. The SCAN Policies Database is a resource for researchers, analysts, child welfare agency staff, and others interested in examining differences between states in their definitions and policies on child maltreatment and how they change over time.

### Content

The scope of the SCAN Policies Database includes information about state definitions and policies related to child abuse and neglect for all 50 states, the District of Columbia, and the Commonwealth of Puerto Rico. The SCAN Policies Database team gathered this information through a document collection, review, and coding process. The team obtained input from states on data collection through a confirmation and verification process. More information about these data collection procedures can be found in the data user's guide and data collection protocol, accessible at <https://www.scanpoliciesdatabase.com/data-use-resources>.

The SCAN Policies Database 2021 represents data collected, reviewed, and verified between July 2021 and January 2022. The data reflect the state definitions and policies for the calendar year 2021. The scope of topics in the database includes states' definitions of child abuse and neglect, as well as information about policies related to reporting, screening, and investigating child maltreatment. Key aspects of the child welfare systems' response and context are also included.

The content in the SCAN Policies Database is organized into six domains. The state profiles, codebook, data collection protocol, and data file are also organized by these domains. In the protocol, each question begins with a letter prefix identifying the domain for each variable. The six domains with the identifying protocol number prefix are listed below.

Domain	Question prefix
Definitions	D
Reporting	R
Screening	S
Investigation	I
Child welfare response	W
Child welfare system context	C

## State profile

This SCAN Policies Database state profile is a summary of the information collected about the definitions and policies for the identified state. It is organized by six domains, with each section containing a set of tables that depict the state's information for all variables within that domain.

The state profile presents data for each variable with “yes,” “no,” “unknown,” or other response as appropriate. The response of “unknown” appears for topics that could not be located from the state's available resources or verified with that state. In some cases, “logical skip” appears when a question was not applicable to a particular state, given a related response on a preceding question.

## Data use resources

Several data use resources are available to support users of the SCAN Policies Database:

- **Data user's guide:** The guide has detailed information about the data set, including the process used to collect and review the data, the scope of information included in the data set, guidance on using the data, such as how to link the data with other data sources, and notes about specific topics. The data user's guide includes appendices with information on corrections to the SCAN Policies Database 2019 and a summary of changes to the data between 2019 and 2021 that reflect changes to state laws and policies during that time period. There is one data user's guide that is updated and applicable for all rounds of data collection for the SCAN Policies Database.
- **Codebook:** The codebook provides information about each variable in the data set, including variable names, labels, definitions, protocol number, variable type, and frequencies. The codebook includes several appendices, including a list of all sources used to review and code data. There are separate codebooks to summarize the data from each round of data collection.
- **Data collection protocol:** The protocol has the questions used to collect information about states' statutes and policies as part of the data review and coding process. There are separate data collection protocols for each round of data collection for the SCAN Policies Database.

These data use resources can be found on the SCAN Policies Database website (<https://www.scanpoliciesdatabase.com/data-use-resources>) or from the National Data Archive for Child Abuse and Neglect (NDACAN) (<https://www.ndacan.acf.hhs.gov/>).

## Supplemental Notes on State

### Definitions

Although Illinois statute includes educational neglect as part of the definition of neglect, the Department of Children and Family Services (DCFS) does not accept or investigate reports of educational neglect. Each school district employs truant officers who handle issues involving school attendance. Hotline staff refer all calls regarding educational neglect to the child's school or the school's district office to report chronic non-attendance.

### Reporting

The state has a centralized statewide hotline, but asks that if the call is not an emergency, reporters submit a report online through an online reporting system on the DCFS website.

### Screening

The following additional information is required for screening a report:

1. Demographics of the family, including whether there is a noncustodial parent
2. Identity of those who reside in the home and their relationship to the child victim
3. Whether the alleged perpetrator is in a caretaker role
4. The location, residence, and contact information of other subjects or involved parties who do not reside in the home
5. The reporter's basis for reasonable cause to believe a child has been abused or neglected
6. Any information about substance use or misuse in the child's home
7. Any information about a history of domestic violence
8. Whether any report subjects have a history of involvement with law enforcement
9. Reporter information, when the reporter is mandated or non-mandated and willing to provide such information
10. Any knowledge the reporter has about a current risk of harm to the child
11. All identified safety issues known to the reporter
12. Any knowledge the reporter has about potential danger or threat to Child Protection staff
13. Any knowledge the reporter has about the mental, emotional, and physical condition of the alleged perpetrator
14. Any knowledge the reporter has about the mental and physical condition of the alleged child victim(s)
15. Any information the reporter has about communication needs of the child, family, or alleged perpetrator, and the subject's preferred language or method of communication
16. Whether any subject of the report has a Native American tribal affiliation
17. The identity and location of possible witnesses to, or people with information about, the alleged abuse or neglect
